

SYSTEM AND METHOD OF MANAGING DOCUMENTS OVER A COMPUTER NETWORK

Abstract of the Disclosure

Embodiments of the invention include a document management system that organizes projects into accessible documents in an online computer network, such as the Internet, or computer readable media, such as an optical disk or other media. In one embodiment, the system includes a software utility for generating project-specific websites. Users accessing the website can gather information useful in the submission of forms, documents, or the like.
